

The meaning of greenery

Do you know what impact trees have on our lives and what they do? Someone remembers the production of oxygen, and someone the extraction of wood or for building material or for heating. Trees have a great influence on our lives and the environment in many other ways as well. Trees cool the surrounding environment by evaporating water, produce oxygen, leaves bind dust, retain water for the immediate surroundings, serve as a windbreak, provide shade.

Task No.1

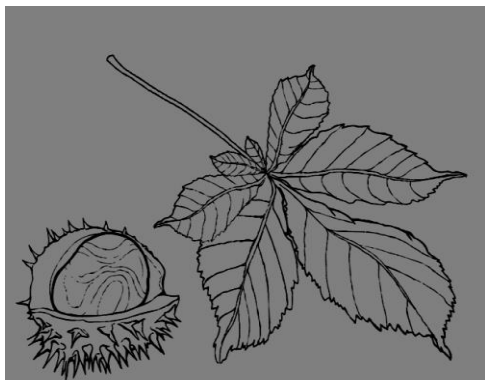

Give examples, what do you think we can label as greenery? Do you think that this greenery affects you in any way during the day? If so, give an example.

Task No.2

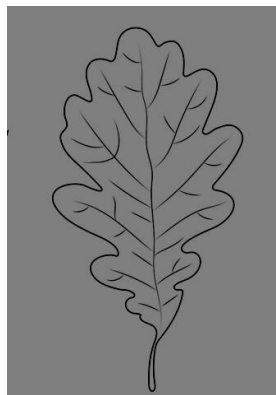

Do you know that one tree produces 1.7 kg of oxygen per day, which is enough for 3 people per day? Try to estimate how many trees should be in the city where your school is located, so that the production of oxygen for all city residents is covered. If you don't know how many people live in the city where your school is located, use the internet to help yourself. :-)

Task No.3

Can you identify the trees by leaves? Try it!
